

## **Master of Arts Environmental Policy**

The Master of Arts in environmental policy (MAEP) at Grenfell Campus, Memorial University, is a unique program coordinated by the Environmental Policy Institute (EPI) of Grenfell. It builds on Grenfell Campus's core strengths in environmental programming, which includes environmental policy, environmental studies, environmental science, and sustainable resource management.

MAEP has been designed to integrate these diverse fields of study and fill the gap in environmental policy expertise locally, regionally, nationally and internationally by cultivating students' research and professional skills in the field of environmental policy.

It combines a thesis-based program (2 years) or a research paper-based program (1 year) with an internship to offer students a means of bridging the policy-science divide while providing a valuable experiential learning opportunity and exposure to challenges faced by practitioners. This structure ensures a relevant program for students and mid-career professionals who wish to return to upgrade their credentials.

### **Why study environmental policy at Grenfell?**

Pursuing a Master of Arts in environmental policy is a great way to develop your research, writing and analytical skills while exploring and expanding your career opportunities in the field of environmental policy.

MAEP is specifically aimed at people wishing to gain expertise regarding contemporary environmental challenges and potential policy alternatives. The program provides both introductory and specialized modules in environmental policy, and we welcome applicants from a diverse range of academic backgrounds including humanities and social sciences, environmental sciences, law and society, business and engineering.

MAEP also appeals to professionals already working in fields related to environmental policy. The part-time option allows these professionals to continue working while upgrading their credentials.
